

Freezer 7 Pro (Socket 775) Clip Removal Procedure

For Freezer 7 Pro users, first detach the Fan from the cooler.

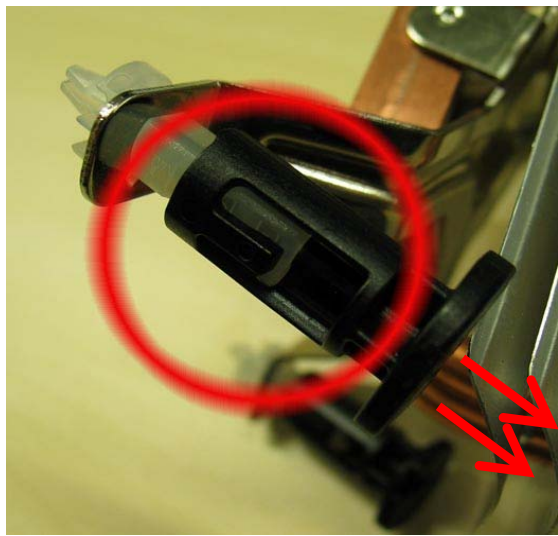

After removed the Freezer 7 Pro from the motherboard, the clip position should look like this. The hook on the black clip is blocked by the white clip.

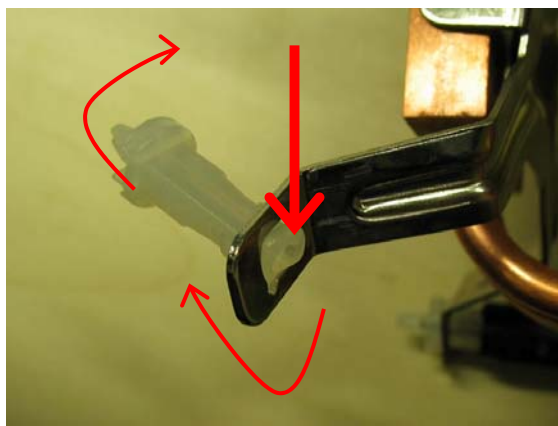

Therefore, the aim is to rotate the black part by 90 degree from where it is removed from the motherboard.

Use pliers and grab the top part, rotate 90 degree.

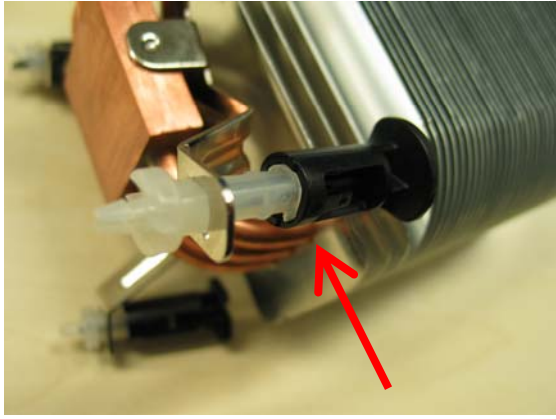

Now there is nothing blocking the hook, pull the black part from the white clip.

Pull the white clip to the end, the metal clip is stopping the white clip from leaving the hole. Grab the end and twist it according to the arrows so that the white clip may leave the metal clip.

FOR RE-INSTALLATION:

Simply reverse this step by hooking the head of the white clip to the metal hook and twist it into the hole.

Align the black clip according to the shape of the white clip. Push the black clip towards the white clip until they are clipped together.
